# Microsoft Word 2016 for Beginners

Hannah

Digital Literacy Specialist

# What is MS Word?

- Microsoft Word is a word processing application.
- Word is a part of the Microsoft Office software suite.
- Word allows you to create, edit, and save a variety of typed documents, including letters, resumes, lists, and much more.
- Word is a linear word processor—letter follows letter, word follows word, paragraph follows paragraph to fill the page with text.

# What we will cover

- The Microsoft Word 2016 interface
  - The Ribbon, tabs, groups, commands
- Creating and saving documents
- Basic formatting tasks
  - Changing font, size, color
  - Text alignment
  - Line spacing
  - Emphasizing text
  - Creating lists

# Clarification of Terms

- For the purposes of this class, I want to clarify some vocabulary:
  - “Click” will mean one left click
  - “Double click” will mean two left clicks
  - “Right click” will mean one right click

# A Quick Note

- There are usually a few different ways to accomplish the same task in MS Word.
- Find a way that works for you and stick with it.
- You only need to know one way to get the job done—knowing more ways is just a perk, not strictly necessary.

# To Open Word

- Double click on the Word Icon on the Desktop.
- Click on the Word Icon on the Taskbar.
- Search for Word in the Start Menu.

# Want to learn more?

- Learn more about Microsoft Word 2016:
